

A diagram of a closed system, represented by a vertical cylinder with a gray background. The cylinder is divided into two main regions. The upper region is a large, white, rounded rectangular area labeled "gás". The lower region is a smaller, white, rounded rectangular area labeled "líquido". The boundary between the two regions is a wavy line. Above the "gás" region, there are several small, white, oval shapes. Below the "líquido" region, there are also several small, white, oval shapes. Two arrows point from the "líquido" region towards the boundary: one points upwards and to the right, and the other points upwards and to the left.
